Interface Design using CSS

Assignment Three

How Sweet Is This!

Description:

Using everything that we have covered over the course of the semester, create a web page about your favorite candy. Incorporate some interesting facts about the candy, some eye-popping imagery, and perhaps even some nutritional information.

Submitting Your Work:

Please read and follow the submission instructions carefully, if the submission **does not** follow the instructions a **zero** will be provided for the assignment.

- Upload the wp-content folder to your GitHub repository
- Submit the GitHub link to the Blackboard Submission

Instructions:

Please read and follow the instructions below carefully:

1. Choose your favorite candy
2. Gather images and text about your candy. Please **do not** use filler text for the content of the web page.
3. The layout for the page should be created using a liquid approach. This does not mean that the layout needs to be full-width but if the page is not full-width the contents of the page should be aligned to the center of the browser.
4. The page should be constructed with the appropriate semantic HTML elements.
5. Create a separate CSS file to manage all the styling for the webpage.
6. Use a custom font that would be appropriate for the type of content that will be on the webpage.
7. Include some enhancements to the HTML elements, some ideas:
   a. Gradient backgrounds
   b. Multiple background images

c. A cool hover effect
d. Maybe even an SVG
8. Create a footer that contains a logo, company information, and a quick contact form (just the front end, the form does not need to work!).
9. Validate your HTML
10. Validate your CSS

Evaluation:

Please refer to the chart below for a breakdown of the evaluation.

Task	0 - 1	2 - 3	4 - 5	Mark
Valid HTML	Validation found 5 or more errors	More than 1 but less than 5 errors were found	No errors found	/5
Valid CSS	Validation found 5 or more errors	More than 1 but less than 5 errors were found	No errors found	/5
Metadata	The required metadata was missing	Most of the metadata was found	The required metadata was used	/5
File Organization	Files were not organized	Some organization was found	Files were organized	/5
Semantic Elements	The elements were not used correctly or contained errors	Most elements were used correctly	HTML was well structured and the elements were used correctly	/5
Layout	There was no attempt at creating a layout or the layout did not use liquid measurements	The layout did not meet all the requirements	The layout used liquid measurements and had a professional finish	/5
Font	A custom font was not used	A custom font was used but	A custom font was used	/5

	or the font was not styled	little styling was applied	and the font was styled	
Enhancements	No element enhancements were used	An attempt to add enhancements was found	Enhancements were used and added to the overall page appearance	/5
Page Styling	Little styling was added to the page or no CSS was used	The page some styling	The page had a professional finish	/5
Total				/45
